

Are you protected from a “Computer Disaster”?

Think you’re not at risk?

- Do you know where all the critical data in your organization is located?
- Are you confident your systems can’t be compromised by a virus, spyware or email spam?
- Is your power protection adequate for your network infrastructure, servers and workstations?
- If your systems were unavailable tomorrow, do you and all of your employees know exactly where to go and what to do?
- How long can you afford to be without the systems that run your business?

If even a “minor disaster” struck your company, would you know what to do?

The threat of computer and network interruptions is real. It’s almost impossible to avoid every power outage, every virus attack.

CERT, the Computer Emergency Response Team at Carnegie Mellon University, reports that in the five years from 1998 to 2003, the number of reported incidents grew at a compound annual rate of over 100%! The cost of downtime mounts up very quickly, averaging over \$200 in revenue per employee hour across a broad range of industries.

Business Solutions Unlimited provides a range of innovative services to help you manage risks to your Information Technology investment. Solutions are based on a proven proactive approach to IT Management and are custom-designed for each client.

No one can insure you won’t be a victim of a disaster or even a minor disruption, but now at least you can receive guidance, service and restoration help should you ever become part of the ever-expanding statistics.

Can you afford to be without this protection for your business?

To find out how to manage your IT risk and assure your business doesn’t become a statistic, contact Don Bloom at BSU – 847-559-0992 or via email – dbloom@bsu-usa.com
